

Laboratories for Water Quality Analysis

(Laboratories located in Riverside, Orange, San Bernardino, and San Diego Counties)

Water tank testing is required as part of the annual inspection/permitting process for a Mobile Food Facility operating in Riverside County. A copy of test results utilizing a quanti-tray method, from an approved, certified lab must be provided to this Department before your permit may be obtained. Should the water tank test positive for coliform, it would need to be properly sanitized and the test repeated until the analysis shows a negative result. **Our Department will not permit any Mobile Food Facility with a quanti-tray test showing positive/presence of coliform bacteria.**

The following certified laboratories provide water testing as part of their services. This list may not be complete and Riverside County does not endorse any particular company.
