Mosquito control applications scheduled for 2 locations in Nuevo on Wednesday morning

Due to the high number of mosquitos, the Riverside County Vector Control Program has scheduled ultra-low volume ground applications using truck-mounted sprayers to reduce the number of adult mosquitos. The treatment will occur in 2 separate locations in Nuevo. The first area covers 168.5 acres and is bordered by 9th Street to the North, Reservoir Avenue to the West, Yucca Avenue to the East and 10th Street to the South. See map below.

The other area, near Mystic Field, is 48.5 acres. This location is bordered by Reservoir Avenue to the North, Orange Street to the East, Lakeview Avenue to the South and Magnolia Avenue to the West. See map below.

The application of EPA approved mosquito control product Zenivex (EPA Reg No 2724-807) is scheduled for Wednesday (9/26) at 5am.

All products used are registered by the Environmental Protection Agency (EPA) for the purpose of controlling mosquitos and protecting public health. The products are applied according to label instructions by trained and certified technicians. Although the products pose very low to no risk, some people may prefer to avoid exposure. To minimize exposure, residents and pets should remain indoors and keep windows closed during and for 15 minutes following ground application. The amount of material sprayed is three ounces per acre, which ensures that

humans, animals and crops are safe. Signs will be posted Monday (9/24) along the route informing residents of the control efforts.

In addition, Vector Control staff are intensifying mosquito surveillance, searching out breeding sites, and conducting larval control where appropriate.

Protect yourself from mosquito bites:

Apply Insect Repellent. Use a repellent with DEET (N, N-diethyl-m-toluamide), picaridin (KBR 3023), oil of lemon eucalyptus [p-methane 3, 8-diol (PMD)] or IR3535 according to the instructions on the product label. DEET products should not be used on infants under two months of age and should be used in concentrations of 30 percent or less on older children. Lemon eucalyptus oil should not be used on children under three years of age.

Be Aware of Peak Mosquito Hours. Dawn and dusk are peak biting times for many mosquitos. If mosquitos are biting you during the daytime hours, please mention that when you call our office because it might help identify the species of mosquito in your area.

Clothing Can Help Reduce Mosquito Bites. Wear long-sleeves, long pants, and socks when outdoors to help keep mosquitos away from skin.

Mosquito-Proof Your Home. Drain Standing Water. Mosquitos lay their eggs in standing water. Limit the number of places for mosquitos to breed by draining/discarding items that hold water. Check rain gutters and drains. Empty and scrub out any unused flowerpots and wading pools. Change water in birdbaths, livestock troughs and pet bowls at least weekly, scrubbing thoroughly before refilling.

Install or Repair Screens. Keep mosquitos outside by having tightly fitting screens on all of your windows and doors.

Please call the vector control office at 951-766-9454 if you have any questions, would like to report a mosquito problem in your area or to request mosquito larvae eating fish. You may also visit our website www.rivcoeh/programs/vector or Facebook page <https://www.facebook.com/RiversideCountyEH/>
